OLE and Microsoft Application Programming Interface (API) Support for OLE and Microsoft Application Programming Interface (API) was introduced with AutoCAD 2014, to allow external applications to interoperate with AutoCAD. The objects are exposed through COM. While the initial version of the API did not have C++ or C# language support, version 1.5 added these options. Office Fluent User Interface AutoCAD 2018 introduced the Office Fluent User Interface (OLEU) which replaces the old, non-fluent UI. The new UI follows the same approach as Office 2007 and Office 2010. Features can be set and modified on the Ribbon, menus, toolbars and in the Properties. The toolbars and menus are also replaced with a toolbar. Office Fluent Design Interface AutoCAD 2019 introduced the Office Fluent Design Interface (OLEUi), which is the successor of the Office Fluent User Interface (OLEU). Supported languages AutoCAD C++ AutoCAD LISP

Filters and Auto filters Tools AutoCAD 2019 introduced a new  
command line, using the command line scripting language AutoLisp.  
This provides a command line that supports tab completion and  
parameter handling. For example, the command line p=111;q=222  
expands to: pd=111&cp=222 This differs from previous versions of  
AutoCAD where the command line can only accept one parameter at a  
time. Task categories and dialog boxes Task lists AutoCAD 2008  
introduced task lists in the drawing window. Task lists are similar to list  
view, but can be used to display the drawing content organized in  
categories. They are not drag-and-drop like task lists in Microsoft Word.  
Dialogs Contextual User Interface and MDE AutoCAD 2007 introduced  
a new UI and integration with Microsoft Office Outlook and the  
Microsoft Enterprise Desktop Environment (MDE). This integration is  
called Contextual User Interface. Contextual UI brings together  
contextual help, programmable interface and context-sensitive help. See

In response to a growing concern in the United States and worldwide over the health risks from exposure to depleted uranium, two groups representing military veterans have filed a lawsuit seeking to halt ongoing testing of depleted uranium munitions. The lawsuit, filed in federal court in New York, aims to prevent the U.S. Department of Defense from carrying out its plans to expand depleted uranium testing until “there has been a thorough environmental review by an independent third party.” It also seeks to compel officials to halt a massive planned future program of tests in Europe, in effect halting an experiment that will pose unknown risks to members of the public in other countries. “It is appalling that the U.S. military has chosen to test these deadly and dangerous substances on our veterans,” said Michael Meyers, a veteran and founding member of the National Veterans Committee, which filed the suit. “We need the U.S. Army to carry out its obligations to our veterans, not experiment on them with toxic substances that will forever damage their health.” In October, the Veterans of Foreign Wars and the National Military Family Association, representing the “tens of thousands of U.S. military members and veterans” who “survived serious injuries and illnesses directly attributable to DU exposure, ◆
