```
user_auth_form = UserAuthForm(request.POST or None) if user_auth_form.is_valid(): user = user_auth_form.save(commit=False) user.is_active = False user.is_anonymous = False user.save() return render(request,'user/index.html',{'user':user}) else: return render(request,'user/index.html',{'user':user})
```

But I don't know what to write in the else statement in order to use the method get_or_create EDIT I currently have this in my models.py

```
class User(models.Model): user_name = models.CharField(max_length=30) user_password = models.CharField(max_length=30) is_active = models.BooleanField(default=True) is_anonymous = models.BooleanField(default=False) def __unicode__(self): return str(self.user_name)
```

A: You can only use get_or_create if you also have a separate model for users, something like this:

```
class User(models.Model): ... # Other fields user = models.OneToOneField(User) a1d647c40b

Import AutoCAD drawings into Microsoft Project for cross-referencing purposes and for determining if imported content is complete. (video: 2:20 min.) Markup Assist extends AutoCAD's standard 3D navigation, such as on-screen rotation and scaling, to CNC machining. Improved Solid View: Perform basic tasks using points and polylines. Define and segment your own cutting paths. Export an STL file. Use the Fit to Print button to connect your parts with 3D surfaces. Change Shape dialog box: Create custom shapes with no limits to the number of segments. Choose from a variety of shapes including polygonal and spline faces. Climb: Bring your drawings into 3D and place 3D objects into your drawings. You can now use these objects as guides for your drawings. Add line numbers to your drawings. Keep track of the number of objects in each drawing. Create wireframes in a new task called "Draft Wire." You can use the wireframe to create exploded views or delete entire parts of your designs. New camera view: Use any AutoCAD camera view to view 3D objects in the context of your drawings. New tools for 3D navigation: Import 3D files into your drawings and navigate through the space with the Navigate button. Use the On-screen controls to easily move around in 3D. Create lines based on any object in the drawing. Improvements to 3D file storage: Store in compressed files and multi-file zipped archives. Linetypes: Use inked and edited linetypes with all tools, the Print dialog, and layout tools. Create custom linetypes for your drawings. Customize your linetype display and layout toolbars. New LINETYPE TOOLBAR OPTIONS command: Display linetype colors in the toolbar. Improvements to dimensioning: Determine the dimension line's length by selecting the dimension line and using any point on the dimension line. You can also use a selection handle on the dimension line. Use any dimension line in your drawings and use the same point on the dimension line to determine the dimension line's length. Project
