If that wasn't enough, it comes with a user-friendly interface and a set of useful tools that make it easy to clean and disinfect your system without using many mouse clicks and additional disk space. While looking for a solution to the problem of clean and remove my anti-malware program my PCs started to show random reboots. At first I suspected the network card, and since the problem was persistent I opened up a case with the service provider. I was told I had a system failure and that they had the working components to replace the cards. Upon the replacement of the cards I was still having reboots. The service provider still didn't want to replace the system because it was still under warranty. I explained that the system I was using was my spouse's computer and I didn't want to pay for a system replacement just because they couldn't fix the issue. After a few more weeks of this my spouse installed a different anti-malware program. The problem resolved. After I was given another CPU to work with I tried to reinstall the anti-malware program. I got the same problem. It was at this point I found a great tutorial on the Internet that told me to try a hard disk scan. I had no idea what a hard disk scan was so I looked it up. All I found was there were a few options of what a hard disk scan could do to a computer. Being a newbie of computer savvy I looked them up and chose the option "Backup your files". I restarted my system with all the aforementioned issues still present. Since I had no anti-malware program installed and couldn't install the software I had to do a clean install of Windows 7. I used the "Backup and Restore" from Windows 7 to perform a bootable cd/dvd hard drive to perform a new installation. The install worked great. My anti b7e8fdf5c8
